

U N	Goal	3. Ensure healthy lives and promote well-being for all at all ages
	Target	3.1 By 2030, reduce the global maternal mortality ratio to less than 70 per 100,000 live births
	Indicator	3.1.1. Maternal mortality ratio

I. National indicator

<Type 1>

Indicator	Maternal mortality ratio
Definition	The number of maternal deaths during a given time period per 100,000 live births. The number of female deaths from any cause related to or aggravated by pregnancy or its management (Korean Standard Classification of Diseases (KCD)-7) during pregnancy and childbirth or within 42 days of termination of pregnancy.
Calculation method	Maternal mortality ratio = $\frac{\text{No. of maternal deaths}}{\text{No. of live births}} \times 100,000$
Unit	Deaths per 100,000 maternities

II. National indicator's source

Data sources	<ul style="list-style-type: none"> Source: <i>Cause of Death Statistics</i> Collection method: Compiling data from death reports filed with city, district, and municipal offices, baby and fetal death reports from crematories, and data from the <i>Complementary Survey on Causes of Death</i> of medical institutions.
Calendar	<ul style="list-style-type: none"> Frequency: Annually (Jan 1 - Dec 31 of the reference year) Data release: September in the year following the reference year) (Maternal mortality rates are released as part of the <i>Cause of Death Statistics</i>, which are available on the Statistics Korea Government Official Work Conference website.)
Organizations	Vital Statistics Division(Tel. 042-481-2254), Statistics Korea
Related International Agency	MMEIG(Maternal Mortality Estimation Interagency Group) * WHO, UNICEF, UNFPA, World Bank Group, and UNPD

III. Comparison with UN SDG indicator

① Indicator		② Definition		③ Data value	
Same	Different	Same	Different	Same	Different
Note	<ul style="list-style-type: none"> Slight deviations from global data due to differences in calculations for national data measurement error correction. MMEIG(Maternal Mortality Estimation Interagency Group) was estimated based on 1)country-specific mortality data, 2)WHO life tables data, and 3)UN World Population Prospects. $\text{Global maternal mortality ratio} = \frac{\text{Maternal deaths, 15-49}^{1)}}{\text{Female deaths, 15-49}^{1)}} \times \frac{\text{Female deaths, 15-49}^{1)}}{\text{Live births}^{3)}} \times 100,000$
