III. Comparison with UN SDG indicator

① Indicator		② Definition		③ Data value	
Same	Different	**Same**	Different	Same	**Different**

Note	▌For the purpose of the UN SDGs, the indicator used a four-point scale question "How safe do you feel walking alone in your area/neighborhood?" (answers: very safe, fairly safe, bit unsafe, and very unsafe) and the proportion of population that felt safe was calculated by summing up the number of respondents who felt "very safe" and "fairly safe." The local indicator used a similar five-point scale question and the proportion of population that felt safe was calculated by summing up the number of respondents who answered "often" and "always."
